SUMMARY

Software Engineer with 3+ years of experience building enterprise web platforms using Java/Spring Boot, React and Angular. Designed and shipped a Kubernetes-native performance-testing platform now used by 50+ engineering teams, replacing a licensed vendor solution and contributing to an estimated \$10M in annual savings.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Backend: Spring Boot, Spring Data JPA, REST APIs, WebSockets

Frontend: React, Angular, HTML5, CSS3, Tailwind CSS

Data & Monitoring: MySQL, PostgreSQL, InfluxDB

Infrastructure & DevOps: Kubernetes, Docker, GitHub Actions, CI/CD, Git

Testing: Apache JMeter, Playwright

EXPERIENCE

Comcast India Engineering Center

Chennai, India

Product Development Engineer II

Apr 2025 – Present

- Lead ongoing development and support of the Performance Portal serving 50+ engineering teams, and own the Playwright-based test recorder used by multiple QA teams.
- Own the portal's frontend architecture, including the shared component library and state management, and integrate Grafana dashboards so teams read run results without leaving the platform.
- Standardised UX across four internal products through the shared component library, cutting build time for new features.
- Co-built an AI agentic system for the Performance Portal using Spring AI, Model Context Protocol (MCP) and GPT-4 that autonomously reads Jira tickets, analyses change impact, updates test scripts and triggers performance runs; authored the Spring Boot endpoints behind it.
- Rolled the system out in phases through demos and documentation; adopted by 5 teams, removing manual test-script maintenance from their release cycle.

Tech Stack: Java, Spring Boot, Angular, React, Kubernetes, Elasticsearch, MySQL, Grafana

Product Development Engineer I

Jul 2023 – Mar 2025

- Built the Performance Portal, a Kubernetes-native platform that provisions pods on demand across multiple data centres to simulate user load and monitor application performance by executing JMeter performance tests.
- Drove adoption to 50+ teams via demos to team, organisation and senior leadership audiences, contributing an estimated \$10M in annual savings by retiring a licensed legacy tool.
- Designed and built the frontend end to end, cutting page load time by 40% through render optimisation, code splitting and state-management refactoring, and improving QA cycle efficiency by 60%.
- Implemented concurrent test execution, allowing teams to run multiple performance tests in parallel and trigger runs programmatically via REST API for CI pipelines.
- Built the reporting pipeline end to end: streamed live run metrics to InfluxDB during execution, converted completed output into HTML reports published to a file server, and notified users over WebSocket and email.

Tech Stack: Java, Spring Boot, Angular, Docker, Kubernetes, InfluxDB, JMeter, Grafana, MySQL

Development Engineer Intern

Jan 2023 – Jun 2023

- Extended and scaled an inner-source Chrome extension that records browser interactions and generates Automation test scripts at ~75% accuracy; adopted by multiple QA teams and cut manual test-authoring time ~50% through a script management and editing UI.

EDUCATION

B.E., Electrical, Electronics and Communications Engineering

SSN College of Engineering, Anna University, Chennai, India — GPA: 8.45 / 10

AWARDS

- Circle of Success, Comcast - for innovation in operational excellence.
- Spotlight Award, Comcast - Outstanding contribution to the development and support of Performance Portal.
- 2nd Runner-Up, national-level hackathon conducted by Mitsubishi.
